

ABSTRACT OF THE DISCLOSURE

A short plug-in fuse, having a fuse body received within an insulating housing, is fitted into a short fuse cavity of an electric connection box, so that the fuse body is connected to tab terminals projecting from an inner bottom surface of the fuse cavity. The short fuse cavity is set to a small fitting depth in corresponding relation to the short plug-in fuse, and a pair of guide grooves are formed in each of opposed inner side surfaces of the short fuse cavity, and extend in a fitting direction. A pair of guide ribs for respectively fitting into the corresponding pair of guide grooves are formed on each of parallel opposite outer side surfaces of the short plug-in fuse.
